

Case Study

CLAY & BUCK

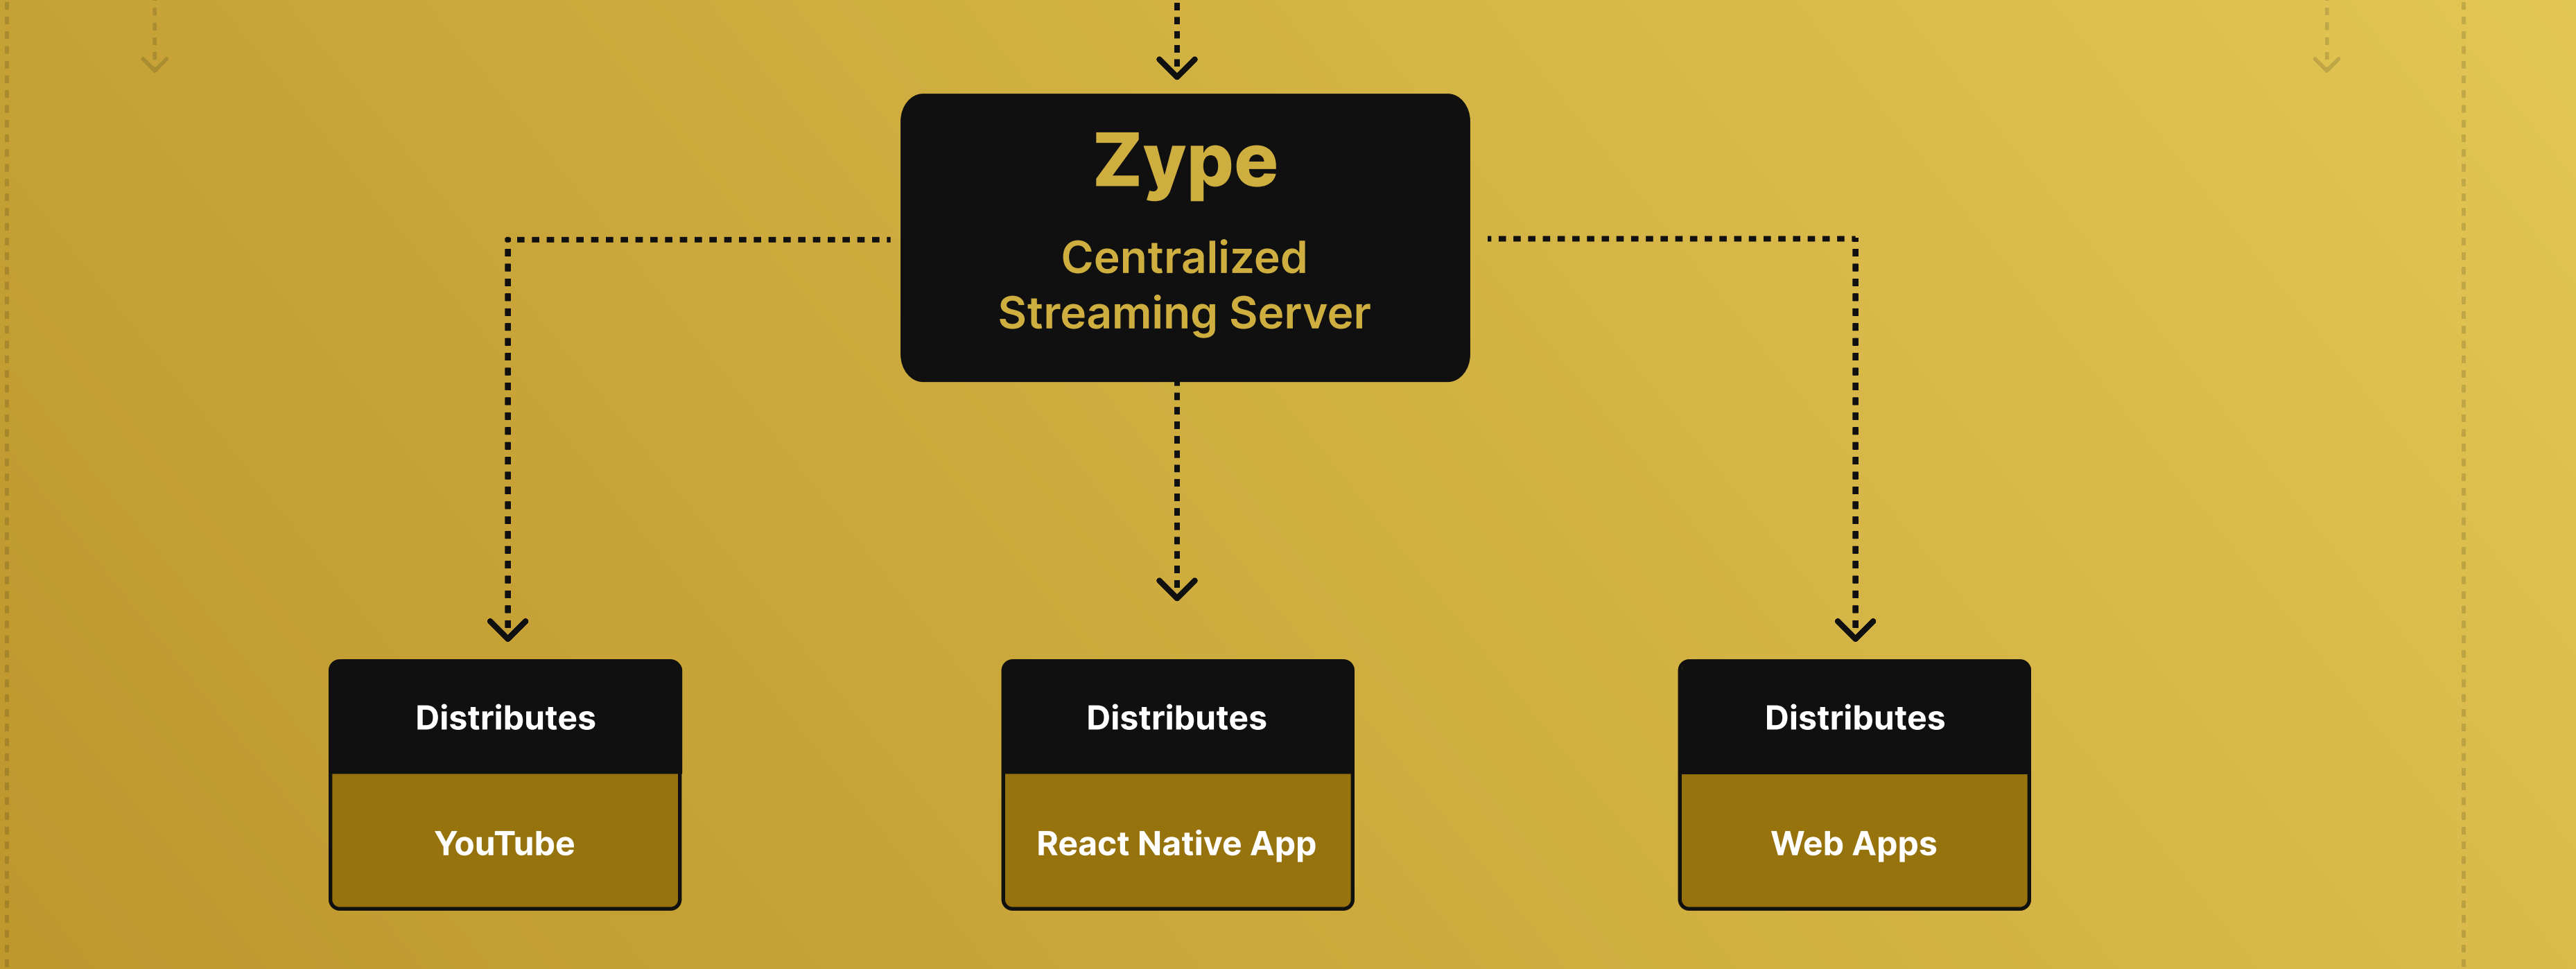

Stream Anytime, Engage Live Hub for
On-Demand Podcasts and
Videos

Project Summary

Bucle Labs undertook the task of developing and maintaining the Clay and Buck ecosystem which includes mobile development. The primary goal of the project was to provide stable android & ios applications and create a seamless user experience. Clay and Buck distribute their original content across multiple platforms. This included live podcasts, on-demand videos, media articles, and interactive features like in-app purchases and subscriptions.

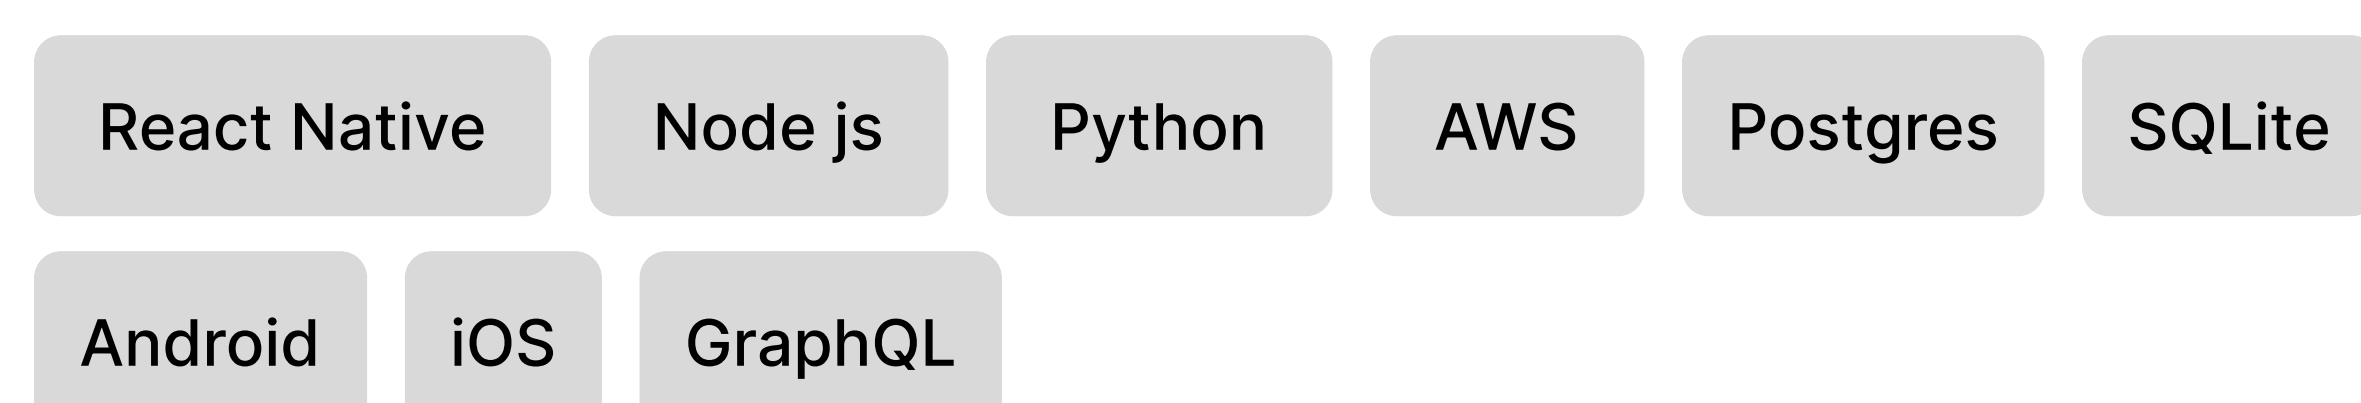

CONCEPT VISUALISATION

Services Used

- Apple Developer Console
- Google Play Console
- React native IAP
- Test Flight
- , React native track player
- GraphQL

Technology Stacks

Objective

The Clay and Buck Mobile App Project aims to create a dynamic and user-centric platform for accessing conservative news and commentary. The project focuses on optimizing user experience, ensuring reliability and performance, and integrating interactive features. By developing an intuitive interface, enhancing backend infrastructure, and incorporating interactive elements such as in-app purchases and real-time feedback mechanisms, the project seeks to deliver a seamless and engaging user experience. Ultimately, the goal is to elevate user engagement and satisfaction with Clay and Buck's conservative media platform.

Key Features

1-Live Streaming

Listen to live broadcasts of the Clay and Buck show directly from the app.

2-Download for Offline Listening

Save episodes to your device for offline listening, ideal for on-the-go access.

3-Push Notifications

Stay updated with alerts for new episodes, live shows, and important updates.

4-Background Playback

Continue listening to episodes even while using other apps or when your device screen is off.

5-On-Demand Episodes

Access a library of past episodes and listen at any time.

6-Custom Playlists

Create and manage personalized playlists of your favorite episodes.

7- In-App Purchases

Unlock exclusive content and features through convenient in-app purchases.

8-User Feedback and Ratings

Provide feedback, rate episodes, and leave reviews to help improve the app.

Clay & Buck Benefits

1 Multi-Platform Availability

The app is available on both iOS and Android devices, ensuring a wide reach and accessibility for all users.

2 Live Streaming and On-Demand Access

2 Live Streaming and On-Demand Access

Users can tune in to live broadcasts or access a comprehensive library of past episodes anytime, fostering greater engagement with the content.

3 Custom Playlists & Offline Listening

Users can create personalized playlists of their favorite episodes, ensuring a tailored listening experience.

The ability to download episodes for offline listening allows users to enjoy content without needing an active internet connection, perfect for commuting or traveling.

4 Social Sharing

Easy sharing of episodes and clips on social media helps increase visibility and attract new listeners.

5 Subscription Integration

Users can subscribe to premium content directly within the app, increasing convenience and boosting subscription rates.

Challenges

API Transition

Migrating from REST to GraphQL posed challenges in backend architecture changes and ensuring seamless functionality during migration.

Google Play Billing Library

We had to focus on secure, reliable, and user-friendly implementations while adhering to Google's policies and maintaining a robust backend for purchase validations and data management.

Media Playback Optimization

Ensuring high-quality video and audio playback across different devices and platforms while managing buffering and latency issues presented technical hurdles.

Apple Pay

Integrating Apple Pay requires understanding and implementing Apple's APIs correctly. This includes managing the payment processing and ensuring that all the necessary data is handled securely.

Our Solutions

1 Rest to GraphQL

Listen to live broadcasts of the Clay and Buck show dirOur Rest to GraphQL solution seamlessly converts existing REST APIs to GraphQL. This approach optimizes data fetching, reducing over-fetching and under-fetching of dataetclly from the app.

2 Google Billing Library & Apple pay

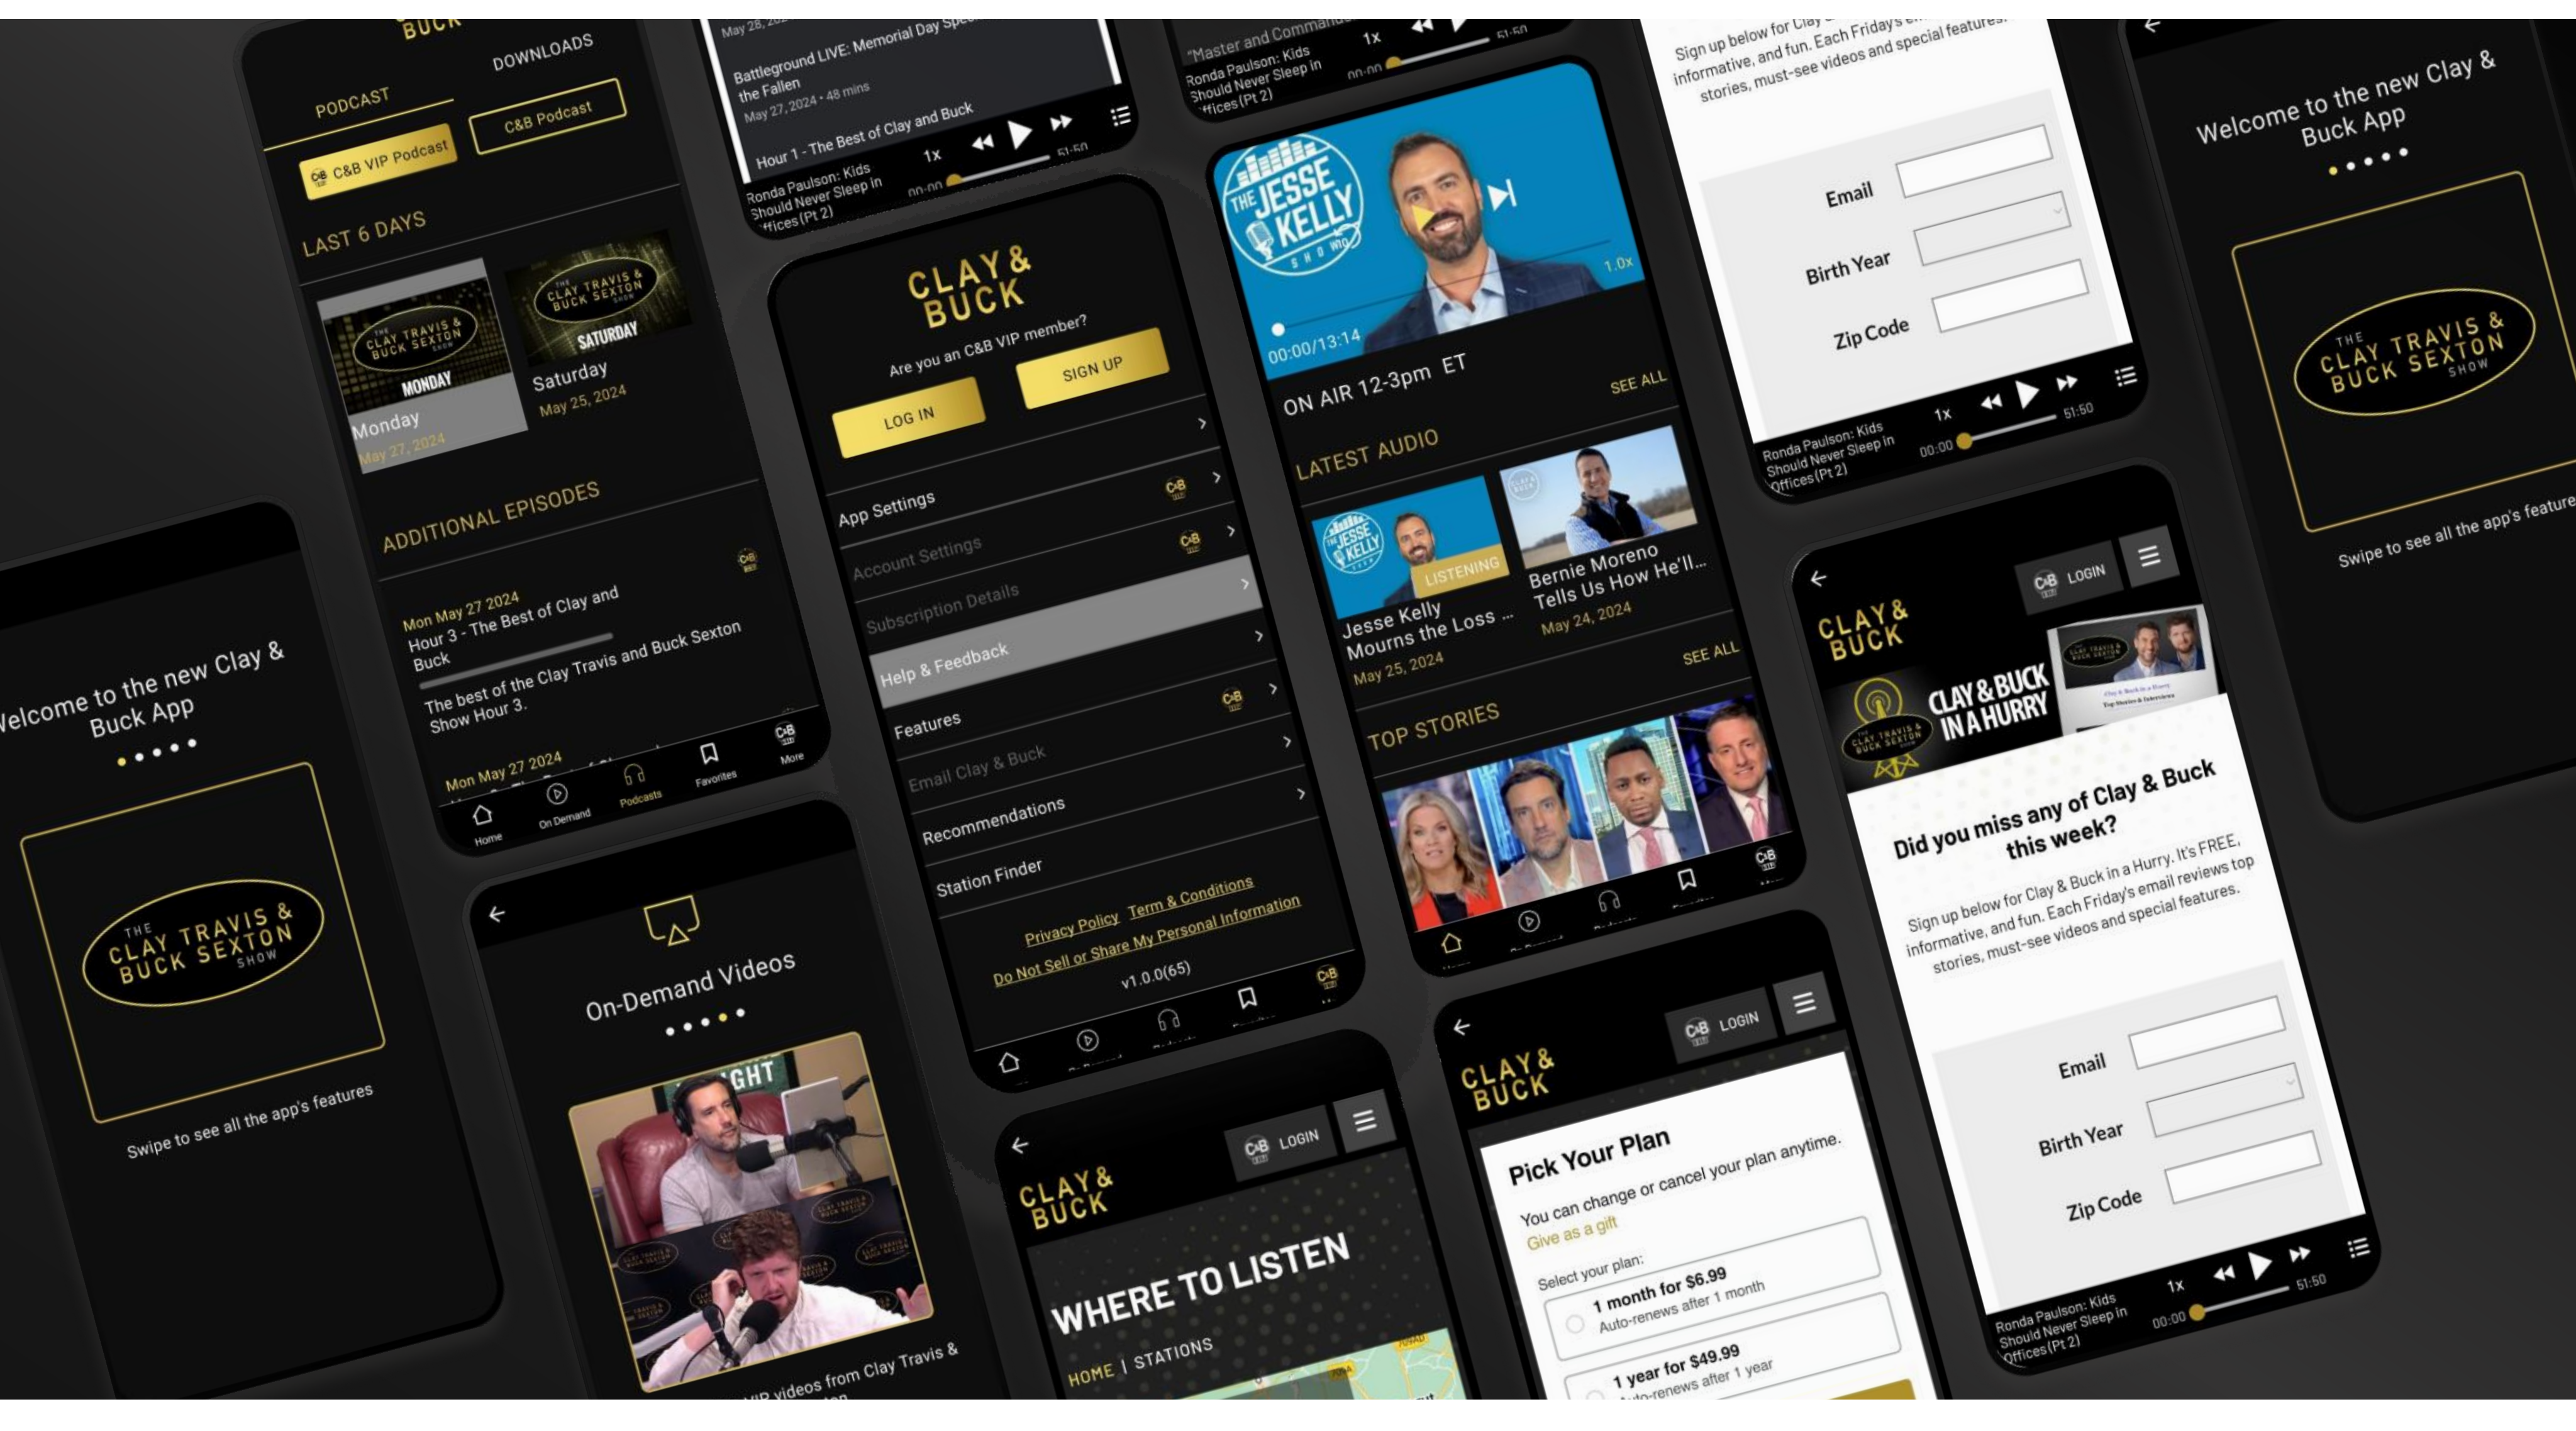

Integrate seamless in-app purchases and subscriptions with our solution utilizing the Google Billing Library and Apple Pay.

3 Background Listening

Enhance user engagement with our Background Listening solution, allowing applications to continue playing audio content even when minimized ensuring uninterrupted playback. Users can control playback through notifications too

4 Custom Playlists

Our Custom Playlists solution empowers users to create and manage personalized playlists with ease.

We are

Buclelabs

BucleLabs deliver unmatched software development services that empower businesses to thrive in the digital era. From established enterprises to emerging startups, we provide top-tier solutions crafted to their needs
