Case Study

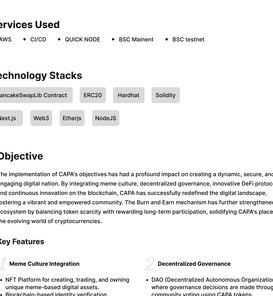
CAKE PANDA

Playful DeFi meme cryptocurrency envisioned

Project Summary

Cake Panda (CAPA) is a unique cryptocurrency merging meme culture and decentralized finance (DeFi). It envisions a community-driven digital nation with innovative protocols, perpetual innovation, and a balance of humor and financial sophistication. Join the revolution!

CONCEPT VISUALISATION



Services Used

- AWS
- CI/CD
- QUICK NODE
- BSC Mainent
- BSC testnet

Technology Stacks

PancakeSwapLib Contract | ERC20 | Hardhat | Solidity | Next.js | Web3 | Etherjs | NodeJS

Objective

The implementation of CAPA's objectives has had a profound impact on creating a dynamic, secure, and engaging digital nation. By integrating meme culture, decentralized governance, innovative DeFi protocols, and continuous innovation on the blockchain, CAPA has successfully redefined the digital landscape, fostering a vibrant and empowered community. The Burn and Earn mechanism has further strengthened the ecosystem by balancing token scarcity with rewarding long-term participation, solidifying CAPA's place in the evolving world of cryptocurrencies.

Key Features

Meme Culture Integration

- NFT Platform for creating, trading, and owning unique meme-based digital assets.
- Blockchain-based identity verification incorporating memes.

Innovative DeFi Protocols

- Smart contract-based tax mechanisms contributing to ecosystem sustainability.
- Transparent and automated reward distribution systems.
- Hyperdeflationary model reducing token supply over time.
- Burn and Earn mechanism that burns a portion of each transaction and redistributes rewards to token holders.

Decentralized Governance

- DAO (Decentralized Autonomous Organization) where governance decisions are made through community voting using CAPA tokens.
- Automated governance processes via smart contracts ensuring transparency and immutability.

Perpetual Innovation and Elasticity

- Elasticity feature in smart contracts allowing real-time protocol adjustments.
- System for periodic relaunches and updates using versioned smart contracts.

CakePanda Benefits

Attractive Rewards for Regular Users:

Active users can trigger the Reservo Chef to claim rewards, kick inactive users, and receive 14-day community and spell Reservo rewards, among many other benefits.

Immense Rewards for Large CAPA Holders:

By alleviating pressure on L1 chains, L2 solutions contribute to the long-term sustainability and scalability of blockchain networks, ensuring they can handle growing demand without compromising on performance or security.

Long-Term CAPA Appreciation by Safe Keep:

If you do not want to remain an active user but still wish to gain profit in the long term, you can stake CAPA through the Safe Keep functionality. This will help you avoid the inactive penalty. A fixed amount deduction happens only after a 14-day cycle, which is quite low at 1%. The normal transaction cost is a 6% tax.

Challenges

PancakeSwap Integration for Swap Pricing and Liquidation

The project utilizes the PancakeSwap library contract to facilitate seamless swap pricing and liquidation processes. Although immensely powerful, implementing these functionalities within the project's contracts requires meticulous attention to detail. Ensuring proper function calls to PancakeSwap's contract methods is essential, albeit occasionally challenging due to the intricacies involved.

Blockchain Data Maintenance

The project is tasked with maintaining critical data present on the blockchain, including user-specific penalty and reward earnings. This involves tracking user activities, such as staking tokens and triggering specific events. To achieve this, the project continuously scrapes the latest blocks created on the blockchain, ensuring real-time data accuracy. Additionally, mechanisms are in place to handle scenarios where users opt for force unstaking, ensuring seamless user experiences.

Gnosis Safe Deployment for Proxy

The deployment of Gnosis Safe proxies offers an unparalleled level of security and flexibility. Each deployment is unique, providing a secure environment for executing transactions and managing assets. By leveraging Gnosis Safe's capabilities, the project achieves a higher standard of contract security and ownership management. This involves deploying proxy smart contracts through Gnosis Safe and ensuring the correct transfer of ownership to these contracts.

Tax Functionality Implementation

An integral aspect of the project is the implementation of tax functionalities for tokens. Each transaction incurs a certain percentage of tax, contributing to the project's sustainability and ecosystem growth. Implementing tax logic involves addressing various scenarios and edge cases to ensure fairness and prevent exploitation. The project's logic is meticulously crafted to handle diverse transaction scenarios while adhering to predefined tax requirements.

Our Solutions

The CAPA DeFi blockchain project represents a groundbreaking initiative aimed at revolutionizing decentralized finance through blockchain technology. By seamlessly integrating PancakeSwap for swap pricing, leveraging Gnosis Safe for secure contract deployments, maintaining critical blockchain data, and implementing robust tax functionalities, the project sets a new standard for DeFi platforms. With a relentless focus on innovation and user experience, CAPA aims to redefine the future of decentralized finance.

Reservo Chef

- Igniting action when Reservo Chef's assets hit $5,000, earmarked for burning, rewards, and activities. Here's the technical lowdown: Every 6% tax deducted from each CAPA transaction pools here, reaching full capacity when CAPA's value hits $5,000. At this milestone, the Reservo Chef springs into action, directing resources towards burning excess tokens, rewarding our community, and funding exciting initiatives."
- Behold the Spell Reservo: Unleashing its magic 14 days after the last spell or launch, distributing $CAKE from the Spell Reservo. Here's the technical insight: Each Reservo Chef triggers the accumulation of a 33% $CAKE share here every 14-day cycle. Once the cycle concludes, it's ready to unleash its bounty, distributing rewards through the Spell Divy mechanism."

In Reservo

- we're revolutionizing token distribution! Cake tokens, meticulously accumulated through taxes, are destined for redistribution to our valued CAPA holders during the Reboot. Here's the scoop: With each relaunch, whether after 365 days or upon hitting the 100 million token milestone, we unleash the power of Reservo. Within its 14-day Spell, a staggering 75% of the cake amassed is poised to flow back to our community, rewarding every user account with a portion based on their token holdings. This isn't just a redistribution—it's a celebration of our collective success, fueling the future of CAPA with each cycle.

Introducing Safekeep

- Your haven for CAPA tokens, shielding them from the 15-day Activity Mandate with just a flat 1% tax applied per spell. Here's the technical breakdown: SafeKeep offers a refuge for your CAPA tokens, sparing you from penalties for inactivity on the protocol. Acting as a sanctuary for long-term investors, SafeKeep only deducts a modest 1% fee upon each Spell Reservo trigger—ensuring your assets remain secure while you focus on your investment strategy."

Design Guidelines

We are Buclelabs

BucleLabs deliver unmatched software development services that empower businesses to thrive in the digital era. From established enterprises to emerging startups, we provide top-tier solutions crafted to their needs

New Age Tech Builders
As a pioneering tech provider, we harness the most advanced technology stacks like Flutter, Go, Rust, Solidity and more.

Security-First Approach
Our commitment to security is ingrained in our "secure-by-design" philosophy.

Culture of Innovation
Innovation is our cornerstone. Our team embraces a culture of continuous learning and experimentation

Innovative and Tech-Savvy

Confident and Charismatic

Solution Oriented

Entrepreneurial Spirit

Thankyou
